

New Employee Onboarding

First week

Collect your laptop from the IT desk on day one. A buddy is assigned to every new employee for the first month. Security awareness training must be completed within 5 days of your start date.

Reviews

Your manager holds check-ins at 30, 60 and 90 days. The 90-day review confirms the end of your probation period.

Accounts

IT creates your email, chat and code repository accounts before your start date. You will receive credentials by your personal email on the Friday before you start.
